# Settings for Jabra headsets

1. Connect the cable for the headset to the back of the phone in the Headphone jack:

2. Connect the other end of the cable into the port labeled with the blue telephone set on the Jabra base.

3. Open the case on the front of the base (the cover that reads Jabra Pro comes off completely).

4. Set the dial labeled with a handset to the letter B (you may also need to put the volume dial up higher because if it is too low, you won't be able to hear). If B doesn't work, then try the other letters until you find one that does (you should hear a dial tone when the correct channel is found).
